Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

S. B. Monestier, M.; Fasy, T.M.; Losman, M.J.; Novick, K.E.; Muller, S.
A. Pescription: Structure and binding properties of monoclonal antibodies to core hist.
A. Accession: S25175
A. Status: preliminary
A. Molecule type: mRNA
A. Residues: 1-120 < MONA

                                                                                                                                                                murine antibody Act-1. Act-1 is active against human alphat-beta7 integrin. Muscosal adressin cell adhesion molecule-1 (MadCAM-1) is a ligand of this paticular integrin. The Act-1 antibody inteferes with alphat-beta7 integrin binding to MadCAM-1, which is present of high endothelial venules in mucosal lymph nodes. Humanised Act-1 can be used to inhibit the interaction of cells bearing alphat-beta7 with cells bearing alphat for alphat-beta7. It can be used for inhibiting leukocyte infilitration of tissues, e.g. for treating inflammatory diseases such as inflammatory bowel disease. The immunoglobulin can also be used for detection, isolation and diagnosis.

The present sequence represents the consensus amino acid sequence comprising the variable region of murine Act-1 antibody determined from several independent mouse heavy chain variable region clones. Act-1 secretive against human alpha4-beta7 integrin. Muscosal adressin cell adhesion molecule-1 (MadCaM-1) is a ligand of this particular integrin. The Act-1 antibody inteferes with alpha4-beta7 integrin binding to MadCaM-1, which is present of high endothabial venules in mucosal lymph nodes. Variable regions were amplified from DNA encoding Act-1 using degenerate PCR primers V20079-88. The degeneracy of the PCR primers produced several different sequences, of which the present sequence is a consensus sequence. The present sequence was used to construct chimeric, humanised Act-1 antibodies, which contain murine antigen binding regions. The humanised immunoglobulin can be used to inhibit the interaction of cells bearing alpha4-beta7 with cells bearing a ligand for alpha4-beta7. It can be used for inhibiting leukocyte as inflammatory bowel disease. The immunoglobulin can also be used for detection, isolation and diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      primers

Act-1 is active against human alpha4-beta7 integrin. Muscosal adressin cell adhesion molecule-1 (MadCAM-1) is a ligand of this particular integrin. The Act-1 antibody inteferes with alpha4-beta7 integrin binding to MadCAM-1, which is present of high endothelial venules in mucosal lymph nodes. The present sequence was used to construct chimeric, humanised Act-1 antibodies, which contain murine antigen binding regions. The humanised immunoglobulin can be used to inhibit the interaction of cells bearing alpha4-beta7 with cells bearing a ligand for alpha4-beta7. It can be used for inhibiting leukocyte infiltration of tissues, e.g. for treating inflammatory diseases such as inflammatory bowel disease. The immunoglobulin can also be used for detection, isolation and diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Protein sequence of murine variable heavy chain region of clone H2B#34.

```
The present sequence represents the heavy chain of humanised murine antibody Act-1. Act-1 is active against human alpha4-beta7 integrin. Muscosal adressin cell adhesion molecule-1 (MadCAM-1) is a ligand of this particular integrin. The Act-1 antibody inteferes with alpha4 beta7 integrin binding to MadCAM-1, which is present of high endothelial venules in mucosal lymph nodes. The humanised immunoglobulin can be used to inhibit the interaction of cells bearing alpha4-beta7 with cells bearing a ligand for alpha4-beta7. It can be used for inhibiting leukocyte Infiltration of tissues, e.g. for treating inflammatory diseases such as inflammatory bowel disease. The immunoglobulin can also be used for detection, isolation and diagnosis.
Mouse; Act-1 antibody; human alpha4-beta7 integrin; Makscosal adressin cell adhesion molecule-1; MadCAM-1; humanised antibody; murine antigen binding region; inhibition; leukocyte infiltration of tissue; treatment; inflammatory disease; inflammatory bowel disease.

                                                                                                                                                                                                                                                                                 9
which has a high affinity for single stranded DNA, low or no affinity for double stranded DNA and specifically binds a DNA hairpin. The MAD can be used diagnose disorders associated with the pathological complexation of DNA, e.g. inflammatory glomerulonephrits and systemic lupus erythematosus. It can also be used to generate reagents to screen for pharmaceutical agents, and treat and/or prevent an above disorder.

The sequence was derived by aligning homologous anti-DNA MAD, whose sequences have been published, as well as several MAD of other specificities obtained from a database search.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Single chain antibody; antibody; epidermal growth factor receptor; EGFR; tumour; cancer; glioma; melanoma; carcinoma; diagnosis; assessment; phage antibody library.

vitro and in vivo. They may also be used in a pharmaceutical composition for the therapy of e.g. melanomas, gliomas and carcinomas. The antibodies and fragments are derived from mice but are humanised so as to cause minimum reaction against them. They are produced using the phage antibody library. (See T04011-T04026 and

This is the amino acid of the heavy chain of murine anti-human Fast chain was obtained from HFFA-secreting hybridoma (FERM BP-5828)

Chain was obtained from HFFA-secreting hybridoma (FERM BP-5828)

Chain was obtained from HFFA-secreting hybridoma (FERM BP-5828)

Chain was obtained from HFFA-secreting hybridoma (FERM BP-5828)

Chair bodies are capable of inducting apoptosis in abnormal cells antibodies are capable of inducting apoptosis in abnormal cells. They are used to evaluate, in animal models, treatments of diseases that involve Fas/Fas ligand interactions, and also to treat such diseases, including autoimmune disease (e.g. systemic lupus crythematosus, Hashimoto's disease, graft versus host disease, solderne, pernicious anaemia, Addison's disease, solderne, pernicious anaemia, Addison's disease, theumatoid arthritis, autoimmune haemolytic anaemia, scriitty, myasthenia carthritis, autoimmune haemolytic anaemia, scriitty, myasthenia ond insulin-dependent diabetes), allergles, atopy, arteriosclerosis, myocarditis, cardiomyopathy, glomerular nephitis, hypoplastic anaemia, hepatitis, AIDS and transplant rejection (all clamed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New antibodies and proteins bind conserved epitope of Fas antigen used to evaluate drugs in animal models and to treat Fas-associated diseases e.g. autoimmune disease, allergy, atopy, arteriosclerosis, myocarditis, hepatitis and AIDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 QVQLQQPGAELVKPGTSVKLSCKGYGYTFTSYWMHWVKQRPGQGLEWIGEIDPSESNTNY

The invention relates to compositions for the prevention or treatment or diseases caused by an abnormality in the Fas/Fas ligand system containing an anti-Fas antibody as the active component. The anti-Fas antibody is either the murine anti-human Fas monoclonal antibody HFETA.

To a humanised version of HFETA containing identical CDRs (complementarity determining regions) to antibody HFETA. Via its interaction with Fas, the antibody of the invention acts as a modulator of apoptosis. The compositions of the invention may therefore be used in the treatment or prevention of conditions such as autoimmune diseases, allery, atopy, arteriosclerosis, myocarditis, cardiomyopathy, glomerulonephritis, aplastic anaemia (panmyelophthisis), hepatitis, AIDS and organ graft rejection. The present sequence represents the heavy chain of the murine anti-human Fas monoclonal antibody HFETA, which is produced by hybridoma HFETA (FERM-BP-5828).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;

This invention describes a novel humanized anti-Fas antibody-like molecule (I) that, induces apoptosis in cells with an abnormal Fas/Fas ingenue (I) that, induces apoptosis in cells with an abnormal Fas/Fas ligand system, by binding to Fas on the cell surface, and prevents comportations in cells with a normal system, by inhibiting binding between the apoptosis in cells with a normal system, by inhibiting binding between the proposition of the invention have anti-inflammatory, anti-arenations are inflammatory, anti-arenations are inflammatory, anti-arenations are inflammatory, anti-arenatory dermatorogical, immunosupressive, thyromimetic, antiarteriosclerotic, cardiant and hepatropic activity. (I) induce antiarteriosclerotic, cardiant and hepatropic activity. (I) induce compositions by binding to cell surface Fas or inhibit it by competitive inhibition of ligand binding. (I) are used to treat and/or prevent diseases associated with the Fas/Fas ligand system, especially systemic complex erythematosus, Hashimotor disease, rheumatoid archititis, graft or versus host disease, Sjorgen's syndrome, pernicious or hypoplastic anemia, Addison's disease, thrombopenia purpura, insulin dependent diabetes mellitus, allergy, arteriosclerosis, myocarditis, cardiomyopathy, glomerulonephritis, hepatitis (fulminant, chronic, viral cells. They bind to both human and murine Fas, so can be evaluated in current entive ligand, do not induce ligand ecliver disease, and have reduced risk of inducing a human anti-murine antibody response. This sequence represents and murine antibody HFETA heavy chain described in the mative ligand, do not induce ligand ecliver disease, and have reduced risk of a murine antire native ligand.
             dermatological; immunosuppressive; thyromimetic; antitheumatic; anti-Fas; nephrotropic; antinfertility; neuroprotective; antiarteriosclerotic; nephrotropic; humanized; apoptosis; systemic luues erythematosus; HFSTA; Hashimoto disease; rheumatolod arthritis; graft versus host disease; Sjorgen's syndrome; anemia; Addison's disease; scleroderma; sterility; Goodpasture syndrome; Crohn's disease; thrombopenia purpura; allergy; multiple sclerosis; Basedow's disease; thrombopenia purpura; allergy; insulin dependent diabetes mellitus; arteriosclerosis; myocarditis; cardiomyopathy; glomerulonephritis; hepatitis; transplant rejection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New humanized anti-Fas antibody, useful for treating or preventing e.g. inflammatory or autoimmune disease, induces apoptosis selectively in cells with abnormal Fas-Fas ligand systems
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 QVQLQQPGAELVKPGTSVKLSCKGYGYTFTSYWMHWVKQRPGQGLEWIGEIDPSESNTNY 60

Anti-epidermal growth factor receptor (EGFR) single chain antibodies and antibodies constructed from anti-EGFR antibody fragments can be used for diagnosis of tumours and assessment of tumour growth in vitro and in vivo. They may also be used in a pharmaceutical composition for the therapy of e.g. melanomas, gliomas and carcinomas. The antibodies and fragments are derived from mice but are humanised so as to cause minimum reaction against them. They are produced using the phage antibody library. (See T04011-T04026 and

MAD 55.1 (ECACC 93081901) recognises the colorectal tumor-associated antigen CA55.1. cDNAs for the heavy (Q94037) and light (Q94036) chains of 55.1 were isolated, and F(ab)', F(ab)2, Fab, FV, scFV or V-min humanized 55.1 constructs have been expressed in myeloma cells and E. coli.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    binding structure; complementarity determining region; CDR; colorectal cancer; tumor associated antigen; hybridoma;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 QVQLQQPGAELVKPGTSVKLSCKGYGYTFTSYWMHWVKQRPGQGLEWIGEIDPSESNTNY

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This polypeptide sequence comprises a consensus sequence of murine heavy chain variable regions (VH) selected on the basis of identity to the VH region (see W27120) of monoclonal anti-idiotype antibody 11010. The sequences were obtained from a GenBank database search. A VL consensus (W27121) was also produced. 11010 has at least 18 departures from the consensus sequences (7 in the light chain and 11 in the heavy chain). B Occur within CDRs and 10 outside CDRs. 11010 polypeptides and polynucleotides can be used in vaccines and pharmaceutical compositions for the treatment of human milk fat globule-associated diseases such as breast
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Monoclonal anti-idiotype antibody 11D10 - elicits immune response against human milk fat globule disease associated tumours, especially breast cancer

R54756 showes an ScFv (VH and VL partner domains are linked via a flexible oligopeptide) between the HindIII and ECORI sites of pRASI11. The 130 bp HindIII-Pst fragment of pRASI11 (064806) was used to replace the corresponding fragment of pRASI11 (064817), to qenerate pRASI8 This generates a NIP-reactive SCFv (NIP = 4-hydroxyl-3-iodo-5-nitrophylacetic acid) with a BgIII cloning site immediately downstream of the pelB leader, suitable for inserting fragments of Ad5 fibre.
The invention is concerned with the fusion of an ScFv with the Ad5 fibre such that the fusion sequence can be used to target cells for
            Virus with modified binding moiety specific for the target cells - used to deliver genes for gene therapy and cancer treatment \,
                                                                                   Example 2; Page 69-70; 110pp; English.
                                                                                                                                                                                                                                                                                                                                                                       gene therapy.
